Wireless RC Monitor Component Ordering

RC Monitors Will No Longer, By Default, Be Supplied With An Antenna Pre-Installed In The Control Box.

Task Force Tips has recently made a change to the ordering of a RC monitor and wireless operator station. The ordering changes are now in effect.

Each RC Monitor that is intended to be operated via a wireless operator station must now be ordered with one of the following items, depending on desired operating frequency:

YE-RF-RAD-9 Wireless Radio & Antenna, 900MHz

YE-RF-RAD-24 Wireless Radio & Antenna, 2.4GHz

Standard RC Monitors will be shipped from TFT with a hex plug installed in the monitor control box in place of the antenna. If the RC Monitor and Radio & Antenna items are ordered at the same time, TFT personnel will install the Radio & Antenna inside the control box. However, if a wireless operator station is desired after purchase, a radio & antenna must also be ordered.

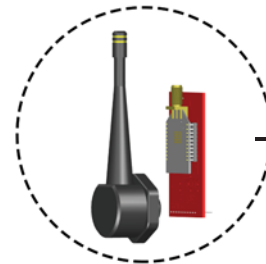

Standard RC Monitor

- No antenna
- No radio

Wireless RC Monitor

- Antenna
- Radio

OR

Ordered Separately
 YE-RF-RAD-9
 YE-RF-RAD-24

The wireless operator station(s) will be ordered separately, as before:

- YE-RF-900** Wireless Operator Station, 900MHz
- YE-RF-900-D** Wireless Operator Station with Display, 900MHz
- YE-RF-2400** Wireless Operator Station, 2.4GHz
- YE-RF-2400-D** Wireless Operator Station with Display, 2.4GHz

With Display

Without Display

Note: 920MHz is available for Australia, contact factory
