

PRODUCT BULLETIN

Coupling/Adapter Appearance Change

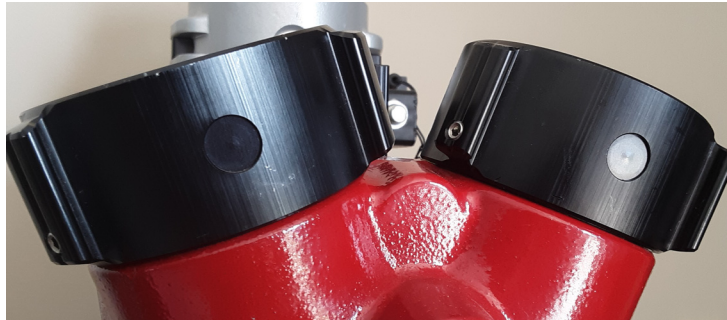

A change has been made to remove the small circular machining details from the outer diameter of all couplings and adapters currently outfitted with the detail.

This change is in appearance only.

Because there is no change to fit or function, all current inventory will be used. Updated parts will ship as current inventory is depleted.

Customers will start to receive goods with the new profile beginning in July 2023.

PREVIOUS DESIGN (with circular machined detail)

UPDATED DESIGN *Beginning July 2023 (no circular machined detail)

*Per part availability of updated design is dependent on inventory levels of previous design.

2.5" NH Rocker Lug Coupling used for illustration.

This change applies to couplings and adapters in multiple sizes and configurations.
