

Tether Kit Installation Instructions

1) Install coupler, making a loop. Ensure at least 1/2" of cable extends through the coupler.

2) Install the loop over the first tip.

3) Install the second coupler on the cable.

4) Wrap the cable around the second tip and install in coupler.

5) Repeat steps #3 and #4 until all the tips are tethered.

6) Snug each loop around tip such that cable rotates around tip freely, but does not slip off tip. Tighten all screws.

7) Tether assembly to stationary point, as shown. Ensure at least 1/2" of cable extends through the coupler.
